Academic Year: 2012, Period S1

Section(s): A

Response Rate: 9.74% (15/154)

General Course Evaluation:**1) What did you value most about this course:**

that he taught the basics and was very well at it

Course Level Feedback

the examples gave at the class are too simple compare with the test

Course Level Feedback

the knowledge i learned,the friends i made during the class,

Course Level Feedback

The professor knew his material very well and made sure the class was able to understand.

Course Level Feedback

Office hours

Course Level Feedback

There was a lot of explanations and examples given, which really helped in understanding of theory.

Course Level Feedback

The Professor made me want to learn more. He made functions seem interesting, even though sometimes they just look like lines. I've taken

MATH1505 in the past but this time I finally understood special triangles and the trig identities. And the graph of how a derivative "ignores" the square was cool. If you paid attention he made the math seem easy, which is very hard to do

Course Level Feedback

all the background material that was presented really helped me to solidify concepts in my head.

Course Level Feedback

Everything about it.

Course Level Feedback

-

Course Level Feedback

Thanks, for making me learn concepts

Course Level Feedback

2) What did you dislike and would want to see changed about this course, if anything:

that the questions in the tests were 100x more difficult then what was taught during the lecture.

Course Level Feedback

give us some assignments to practice

Course Level Feedback

Even though the lecturer said that the test was based on in class examples, some of the questions on the test were not in his slides or even in the textbook.

Course Level Feedback

Tests questions are harder than the book.

Course Level Feedback

Examples given on notes are fairly easy, not like the ones on the test.

Course Level Feedback

Nothing changed, it was very good. Reasonable pace, not unmanageable but fast enough to keep me interested.

Course Level Feedback

The tests were a little on the hard side which was a little discouraging because I thought the lectures were great and I was understanding the concepts, yet I did poorly on the tests.

Course Level Feedback

I can't think of any important thing.

Course Level Feedback

The type of questions solved in class are different than the questions given in test. Like easy Questions are solved in class which looks to be well understood but the questions given in test are much harder than thought.

Course Level Feedback

-

Course Level Feedback

Nothing, It was great experience

Course Level Feedback

3) Do you have any other observations or comments about this course, instructor, tutorial/lab leader, teaching assistant or marker/grader that you wish to add:

the prof can explain a little more about the questions we will be working on during the test so it doesn't come to us as a complete shock

Course Level Feedback

the tutorial's time is totally conflict with my schedule

Course Level Feedback

no

Course Level Feedback

NO

Course Level Feedback

Overall the teaching was good and at a steady pace.

Course Level Feedback

The Professor was amazing, if he is teaching MATH2025 (or any other second year math courses) in the Fall I'll take them without hesitation

Course Level Feedback

no

Course Level Feedback

The professor tries explains things in ways that will be easier for student to understand, and is very patient!

Course Level Feedback

Graders don't appreciate the work that's been done for the question. If you do some parts of the question wrong and some parts right, you get zero anyway. They don't even give you 1 point for the effort. When a student tried to do a question and filled all the space that is given for the question to answer but gets zero for the answer, that's not encouraging.

Course Level Feedback

Teaching is good but the way grades are given is not convenient like if the answer is wrong you get a zero out of 7. They don't give marks for steps which are correct.

Course Level Feedback

-

Course Level Feedback

Thanks, for making me learn concepts
